Gregg Distributors Edmonton Staff, November 2007

Thank You

for 40 Years of Success!

In February 2008, we celebrate our 40th year in business! We are proud of this achievement and it gives us an excellent opportunity to thank you, our loyal and valued customer, for contributing to this milestone.

Originally based solely in Edmonton, over the years we have grown to 17 branches across 3 provinces. We have always firmly believed in remaining 100% Canadian.

Again, we appreciate your support and look forward to a continued relationship with you for another 40 years!

Sincerely,

Gary Gregg
President & General Manager

40 Years Ago....

Roy Gregg

The history of Gregg Distributors began in 1957, when Edmonton businessman and entrepreneur Roy Gregg started selling industrial cleaning products from the trunk of his car, and later from the family garage.

Operations were moved to a commercial facility in 1968 as the business began to grow — we became a limited company and at that point had 4 people on staff. Continuing to grow at a healthy pace, in 1983 the company was taken over by Roy Gregg's son Gary. Shortly thereafter, operations expanded as we opened our first branch in Calgary.

Today, growth is still an ever-present element in the vision for our future. In fact, it's part of our mission statement: "A Growth Opportunity For All". That is — for our customers, our suppliers, our staff, our business associates, and our community. Since that first branch opened in Calgary in 1985, we are now operating 17 branches throughout Alberta, British Columbia, and Saskatchewan and we employ nearly 700 people throughout the Gregg group of companies.

We now warehouse over 1,000 product lines in our main Edmonton location, which is our central warehousing facility at 462,000 square feet. Products are shipped daily to our locally owned partner branches. The full-colour Product Catalogue you're holding is released annually and is used to categorize, sell, and educate our customers and staff of these expansive and diverse products that help us to be a "single source supplier".

We are extremely proud to remain 100% Canadian. Along with this, we offer second-to-none customer service levels, a knowledgeable staff, above industry average fill rates and free delivery service. We are also certified to ISO 9001:2000 Quality Standard.

*This year, **2008**, we celebrate our 40th anniversary and look forward to continued interaction with our customers, suppliers, and our community.*

Proudly Canadian

Giving Back...

At Gregg's, we strongly believe in giving back to the community that has supported us for the last 40 years:

•The staff and management of Gregg Distributors work together to raise funds and awareness for local charities. We also work together in raising funds for The Gregg's Sunshine Fund, a children's charity we created which provides funds for various projects in Edmonton. In the summer of 2001, through a partnership with the **City of Edmonton**, we built a new playground area in Hawrelak Park. We celebrated our grand opening in June 2007 of a new playground area in Rundle Park, the city's second busiest park. We are planning to continue our fundraising efforts and work toward much needed renovations at the Edmonton Valley Zoo. We have made a $500,000 commitment to a new Sea Lion exhibit at our city zoo! We are hoping this commitment will kick-start much needed provincial and corporate support for other exhibits at the zoo. •We all take great pride in our Chrysalis Training Program for physically and mentally challenged men and women. Our Edmonton location acts as a training site to help these wonderful people into the work force. Currently, we have 6 graduates on staff from this program. •We are also proud to be part of the team keeping the Edmonton Oilers in Northern Alberta. At Gregg Distributors, we recognize the benefit the Oilers, Flames, and Canucks can provide for Western Canada — jobs, civic pride, international recognition, and world-class entertainment! Together we have the opportunity to preserve professional hockey in the West for the next generation.

The construction is fully arc welded for extra strength. Full length piano hinges are staked and welded to resist break-in attempts. 8" casters. Shelf is 16 gauge steel, cabinet sides and doors are 12 gauge steel, work top and bottom are 7 gauge steel. 1" drawers have a 100 lb. capacity; larger drawers have a 200 lb. capacity. Load capacity 3400 lbs.; 62"W x 34"H x 32"D.

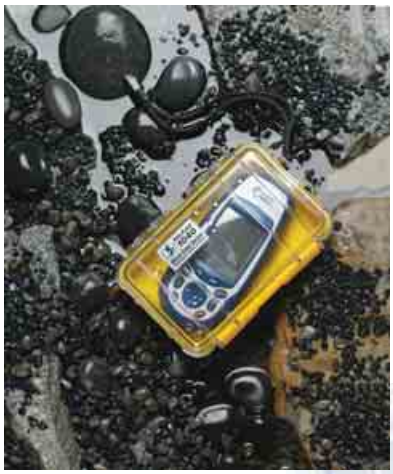
Mini Protector® Micro Cases

The crush proof Micro Case stands up to a 5,000 lb. truck



WATERTIGHT - Splash it, drop it in the river. No problem. The key to a watertight case is its tough polycarbonate body and the rubber liner. When closed, the lid creates a tongue-and-groove fit with the shock absorbing rubber liner, which doubles as an o-ring.
BREATHE IN. BREATHE OUT. - The automatic pressure purge valve works on the molecular level. It uses a Gore-Tex® membrane that allows high pressure air molecules caused from altitude changes to escape. But water molecules, which are larger, are prevented from entering. The result: equalized pressure inside and outside the case.
TOUGH AS NAILS - The single latch made of strong ABS plastic. It allows quick and easy access to contents and a tight seal.

KLEIN TOOLS®
Insulated Tools

The line of insulated tools incorporates all the Klein quality design and construction features that professionals have relied on. The tools combine excellent functionality along with reduction of risk of injury where a tool might make contact with an energized source with voltage up to 1000 volts. All part numbers for Klein insulated tools have the suffix "-INS" and are marked with the official international 1000-volt rating symbol. Not all tools with plastic coatings or plastic handles provide protection against electric shock. Only use those tools that are marked with the official international 1000-volt rating symbol, if there is any chance that the tool will make contact with an energized source. Thick, exceptionally tough, high-dielectric white inner coating is bonded to the tool. Flame retardant, impact-resistant, bright orange outer coating.

"TIGER GRIP" ADJUSTABLE WRENCHES
The unique functioning jaw design precisely grips the flat facets of the fastener while avoiding and protecting the corners of the nuts. Our "Sure Grip" feature also reduces slippage that can damage fasteners. Standard adjustable wrenches are not as precise and therefore must grip all areas of the fastener which leads to stripping and deformation of hardware.
Part No. 17-2410, 10".
Part No. 17-2412, 12".

Geometric "Less Weight, Stronger Handle Design" reduces 10% of the overall weight of the tool. Comfort "Tiger Grip" incorporates a new ergonomically designed handle that provides a comfortable hand fit and a durable grip.

18% to 25% wider jaw opening increases the useful range of fastener sizes and gives the advantages of economy, convenience and lighter weight

11” QUICK ADJUSTING PIPE WRENCH

VISE-GRIP® Quick Adjusting Pipe Wrench - Is built with convenience and durability in mind. The quick adjusting jaw allows for one handed operation and enhances user speed and convenience. A special heat treated steel body and forged upper jaw optimize the tool’s durability. The cast aluminum construction is 40% lighter than a traditional 14” cast iron wrench and thus reduces user fatigue. 2-1/4” jaw capacity is equivalent to standard 14” pipe wrenches. Ideal for pipe diameters up to 1-1/2”. Broached teeth are ideal for most surfaces including black, galvanized, PVC and copper pipe, as well as nuts, bolts and couplings.
Part No. 274001.

QUICK-GRIP BAR CLAMPS

Soft grip handle is larger and more ergonomic, allowing higher clamping pressure with less effort. I-beam bar reduces flexing and bowing. Larger clutch plates allow for easier release. Available in clutch or passive lock. Passive lock has 35% greater throat depth.

HANSON®
Bolt Extractors

Hanson bolt extractors work, when everything else fails. They are ideal for removing rusted and rounded off nuts and bolts. The left hand spiral flutes will tightly grip the damaged fasteners (metric or standard) for quick and easy removal. Because they have both a square drive and hexagonal flats, these bolt extractors can be used with socket wrenches, flat wrenches or impact wrenches. Individual sizes as well as combination sets are available.

Makita Lithium-Ion Extreme Technology

•LXT Makita Cordless Advantage:
LXT tools have been designed specifically for Lithium-Ion technology and redefine "Cordless" by delivering 18V power in the weight of a 12V tool.
•More Power:
The new Makita built, 4-pole maximum torque motor delivers more efficient power in a compact size. Energy is generated every 90° on the magnetic field rather than 180° like the competition. The motor is supported with two steel ball bearings for more durability.
•Less Weight - Better Fit:
With a more compact design, LXT are 40% lighter but deliver 18V power with the weight of a 12V. Plus they are ergonomically designed to fit like a glove for even pressure on the hand and added control.
•More Work:
Makita's LXT Lithium-Ion Batteries and Optimum Charging System produce 280% more lifetime work with 2x more battery cycles than traditional Ni-Cd batteries. LXT Lithium-Ion also provides longer run time, 5x lower self-discharge (for use any time) and sixteen firm holding contact terminals (for constant high power). The 45 minute Optimum Charger and battery communicate throughout the charging process using the built-in memory chip in the battery and the built-in CPU chip in the charger. Combined, these two elements recognize the charging history and condition of the battery and select the optimal charging method. The optimal charging method uses "3 Active Controls" for current control, thermal control and voltage control. The charger also has a built-in fan to cool the battery to produce more lifetime work.

INDUSTRIAL POWER TOOLS

Cordless Power Tools

Makita eXtreme Technology

•MXT Makita Cordless Advantage:
Heavy duty two-piece high power motor featuring a rare earth magnet for increased torque. Locking single sleeve ratcheting chuck is resistant to loosening during operation. The only true 3 mode Hammer/Driver/Drill (8444DWFE). Lever moves to hammer, drill, or driver. No competitive model has this feature. The Makita MXT has a decibel rating of only 76.1 db. Featuring a true aluminum housing for the gears assembly and double sealed ball bearing for longevity of use and dust protection. The MXT drills use different pieces for the motor assembly, armature, and field for reduced replacement costs.

•Metal Planetary Gears:
Precision machined components provide reliable and efficient transmission of power and torque from the motor to the chuck in even the most demanding applications.

•2-Piece Motor:
Makita's modular motor construction allows for easy serviceability and longer tool life. As each component wears out, it can be easily replaced for a fraction of the cost of an entire new motor.

•Easy Mode Selector:
Greater versatility is achieved at the slide of a lever to go from Hammering to Drilling to Driving (on the 8444DWFE only)

•3-Speed Gearing:
The new 3 speed gearing now allows for more efficiency in a wider range of uses. Low range for extreme duty applications. Mid range for heavy duty and high range for optimum light duty use.

•Total Control Trigger:
With true Variable Speed Control.

INDUSTRIAL POWER TOOLS

MINI-GRINDERS: High Performance for Masonry & Metal Cutting —

Choose from Thumb Switch or Paddle Switch

•High Performance Motor with Power Input of 840W:
Provides power enough for masonry cutting, yet still having high heat resistance.

•Small Circumference Barrel Grip for Easy Handling:
Use of Type 55 motor enables the circumference to be smaller than competition's. And use of the same brush as used for Makita 9560 series models allows flat design without protrusions of brush cap. Side handle can be mounted left or right of tool.

•High Dust-Proof Motor:
Armature coated with protective zigzag varnish and field coated with powder varnish protect motor from dust and wire breakage, ensuring durability enough for masonry cutting. Plus high efficiency motor fan to keep area clean. Labyrinth construction protects all ball bearings from dust and debris.

•Shaft Lock for Easy Wheel Changes:
The shaft lock system is made bigger for easier replacement of abrasive wheel. Recessed into the tool housing to prevent accidental lock-ups.

•Gear Section with Increased Repairability:
Use of a woodruff key to assemble gear onto spindle allows for easier repairing of gear section.

•Rotatable Gear Housing:
Can be positioned at every 90 degrees to suit most cutting and grinding operations.

•O-Rings for Protection from Grease Leakage:
Placed in the following portions: Joint between gear housing and bearing box; shaft lock pin installation hole.

Drill Features

SURFACE FINISHES

•DIA® Black — Entirely black finish imparts a lubricant effect, prevents chip welding in the flutes, and contributes to abrasion resistance
•Gold Finish — Low temperature stress relieving treatment for cobalt and super premium steel drills, taps, and dies provides a warm deep gold colour on the surface of the steel and maximizes lubricity
•Titanium Nitride — Super hard coating with a bright gold colour improves the abrasion resistance of drills, and extending the useful life of the drill

ULTRA CUT GOLD

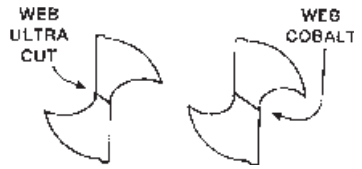
•Longer Cutting Life — Nitro-carburized flute has an increased Rockwell hardness
•Runs Cooler, Less Torque — 135° point takes a smaller chip resulting in less heat and the amber gold surface treatment reduces friction, allowing the drill to cut harder material
•Combats Drill Walking — Split Point gives accurate starting without use of a centre punch
•Holds Tighter Hole Size — Split Point is self centrering thereby limiting the normal oversize drilling characteristics of standard drills
•Chuck Slippage Eliminated — 3 flats on some drills give positive chuck grip virtually eliminating the potential for the drill to slip in the chuck
•Tougher Steel — Special hi-molybdenum tool steel is tougher than cobalt resulting in a thinner web allowing for faster penetration of work hardened steel
•Heat treated at 1196°C and then nitro-carburized at 510°C to be measurably harder than high speed steel
•Tight Tolerances — UCG drills are manufactured to very tight tolerances, surpassing and exceeding any industry standard
•Precision ground point, flutes, body, clearance and drill diameter for the ultimate in accuracy and performance
•Stainless Steel 304, 306, 316 — UCG can be fed faster due to the thin web when compared to cobalt drills resulting in the drill cutting beneath the chip before it hardens — this gives longer life than the cobalt drill

TITANIUM NITRIDE DRILLS

•High performance coating for superior drill performance — made of high-molybdenum tool steel
•Increased Tool Life — Up to 500%
•Increased Cutting Rates — Up to 50% over uncoated rates with no sacrifice in tool life
•Improved Hole Finish — Reduced wear gives an improved finish
•High Abrasion Resistance and Lubricity — Coating hardness to over 80 Rockwell C prevents abrasive wear and high lubricity reduces the friction
•Reduced cutting forces and temperature

COBALT DRILLS

•Cobalt drills are recommended for free machining stainless steel (400 series and 303), titanium alloys and other high tensile strength materials. Used on materials requiring the high red hardness of cobalt to counter the substantial heat generated in the drilling process.
•Manufactured to Type J NAS 907 specifications with a very thick web to provide the strength necessary to limit the breakage of the drill



ULTRA CUT FEATURES/BENEFITS

•135° point cuts hard metals
•Heavy duty web construction for longer cutting life and greater breakage resistance
•Space age nitro-carburized steel withstands substantially higher drilling temperatures while maintaining sharpness
•Split point design won't walk
•Precision ground point, flutes, clearance, and drill diameter for the ultimate in accuracy and performance
•Distinctive gold and black appearance sets it apart from other drills

GENERAL PURPOSE HIGH SPEED STEEL - SURFACE TREATED - 118° POINT

This 118° point, high-speed steel drill performs well in a wide variety of ferrous metal drilling applications. The black surface treatment prevents chip welding and increases abrasion resistance.

HEAVY DUTY TITANIUM COATED - SUPER HIGH PERFORMANCE- 135° SPLIT POINT

Titanium nitride coated, heavy duty, 135° split point drills perform well in very demanding applications. The Titanium coating provides a super hard surface with high lubricity. The tool life may be extended 500% or more in high wear or very abrasive drilling applications. The heavy duty construction makes it ideal for hard metals, work hardening grades of stainless steel and other difficult to drill materials.

HIGH SPEED STEEL - 135° SPLIT POINT - SURFACE TREATED

New advances in drill making technology have allowed us to make an excellent drill. The mechanic length yields a sturdier drill with less flexing. This resistance to flexing may provide longer life than other drills in many applications.

SURFACE TREATED DRILL SETS - HEAVY DUTY

The standard length yields a sturdier drill with less flexing. This resistance to flexing may provide longer life than other drills in many applications. The 125° split point allows cutting of harder materials than general purpose drills. The split point reduces the tendency of the drill to walk and allow for reduced thrust in drilling harder materials.

Starrett bi-metal holesaws are constructed of hardened, heat and abrasion resisting high speed steel teeth with a tough alloy body and cap. This gives them exceptional strength, durability, and shatter resistance for user safety. Starrett holesaws cut through any wood, metal or plastic and can be used in a wide variety of applications from production and maintenance to electrical and building trades. Holesaws feature Fastcut™ variable pitch teeth and a cutting depth of 1-5/8" (41 mm).

4/6 SUPER-TOUGH® BI-METAL HOLE SAWS

For general construction, plumbing, electrical, maintenance work •Bi-metal construction •High speed steel teeth electron beam welded to a steel body •Heavy duty 3/16" thick steel backs on 1½" diameter and larger •Smaller diameters have backs thicker than 3/16" •Thick backs eliminate the need for driving plates and prevent drive pin holes from elongating •Faster, more aggressive cutting plus heat resistant cobalt •Less vibration for smoother cuts •Shatter resistant •High alloy steel body construction for longer life •4/6 teeth with cobalt is a multiple tooth design with varying tooth sets and gullet depths •Deeper gullets provide more efficient chip clearance with less heat build-up. Requires lower feed pressure – ideal for the higher RPM of portable drills

IRWIN® Industrial Tools

BLAIR™ Professional Holemaking Equipment

ROTABROACH® CUTTERS

For precision holemaking in sheet metal and frame materials up to ½" thick, Blair Rotabroach Annular Cutters make clean, burr-free, round holes with no deforming of stock or damage to the surrounding material. Ideal for sheet metal fabrication or PDR and rustproofing access holes because the snap-in plugs fit perfectly. Custom builders and aftermarket equipment installers can also count on the superior quality holes.

Rotabroach Cutters are precision ground and made of M2 H.S.S. with a patented tooth geometry that also prevents chip clogging whether cutting steel, sheet metal or plastics. Unlike hole saws and twist drills that push and tear through materials, these cutters will make hundreds of holes with no deforming of stock, jagged edges or out-of-round holes.

Arbors for Rotabroach Cutters fit 3/8" and ½" hand held drill chucks and use either spring loaded pilots or skip-proof pilots which eliminate pre-drilling operations.

Cut Holes 3x faster and lasts 10x longer than twist drills or hole saws!

BLAIR SPOTWELD CUTTER

Blair Double-End Spotweld Cutters makes removing body panels fast and easy. Their hollow design cuts around the spotweld so weld hardness does not affect tool sharpness. When one end becomes dull, simply unscrew the cutter and flip it over using the new teeth on the other side. An adjustable depth rod sets the tool so only the outer panel is cut, leaving the underlying panel undamaged.
Part No. 13224, Blair Double-End Spotweld Cutter Tool.
Part No. 13214, 3-pack 3/8" Double-End Spotweld Cutters.

HOLCUTTERS™

For large holemaking in sheet metal and other materials up to 1/8" thick.
Holcutters™ are not hole saws. They are precision ground, heat treated tools that easily cut through the stock rather than ripping, tearing, and pushing through as do typical hole saws. They can produce holes 3X faster and cleaner than hole saws in sheet metal and have a dramatically extended tool life.
Holcutters produce holes from 11/16" up to 3" diameter in sheet metal, rubber, gasket or fibre materials, and some plastics. Ideal for aftermarket installations, custom fabrication, trailers, or gauge installation. Arbor fits ½" drill chucks. Holcutters have a new patented Quad-Lead Thread System for quick cutter changes.

Differences Between the Shovel Blades

Forged
The blade, shank, and socket are forged using a single piece of high carbon steel, then tempered. The progressive variation in the thickness of the steel gives the shovel maximum sturdiness in those areas subject to the greatest stress.

Hollow Back
Sturdy one-piece construction. The blade and socket are stamped and tempered from a single sheet of high carbon steel.

Industrial Casters

Caster Types

Swivel Casters
Have a swivel horn and wheel assembly that will rotate through 360°.

Rigid Casters
Have a rigid horn and wheel assembly permitting only straight line travel.

Wheel Types

Sintered Iron
Powdered iron, compacted to and sintered to cast iron strength, makes a concentric and smooth tread that runs quietly and protects floors.
Temperature Range: -40°C — +260°C

Soft Rubber (Ruberex)
Composition rubber wheel combines a soft rubber tread with a hard rubber core for quiet movement, a cushioned ride and maximum floor protection.
Temperature Range: -40°C — +70°C

Hard Rubber (Rockite)
Hard rubber molded composition throughout, this wheel is impervious to oils and greases. High load rating, good mobility.
Temperature Range: -40°C — +70°C

Polypropylene (Polyflex)
Polypropylene wheel is light in weight, and high in impact strength. It resists water and chemical absorption, withstands steam cleaning.
Temperature Range: -28°C — +82°C

Dyna-Tred TPR
Thermoplastic rubber resists chemicals, high temperatures, and wear. Tough polypropylene hub won't dent, mar, or stain.
Temperature Range: -40°C — +82°C

Semi-Steel
Cast iron toughened with steel, this wheel has a high load range and exceptionally long wear life. Recommended for wood and concrete floors.
Temperature Range: -40°C — +427°C

Phenolic (Plaskite)
Phenolic compound reinforced with macerated fabric makes a high strength, high impact wheel resistant to oil, gasoline, even dilute acids.
Temperature Range: -40°C — +149°C

Mold-On Polyurethane (Duro Tred)
Polyurethane tread permanently vulcanized to a semi-steel core delivers a cushioned ride, excellent mobility and long wear under heavy loads.
Temperature Range: -40°C — +110°C

RT
Unique waffle design, specially blended, reinforced thermoplastic material. They resist water, chemical absorption and steam cleaning. High impact.
Temperature Range: -28°C — +121°C

INSULATED TARPS

Closed cell polypropylene is the most superior foam used in insulated tarps. They maintain an even "R" value for concrete curing and maintain their shape for hoarding applications. Closed cell foams stay flexible at low temperatures and compression will not break the enclosed air structure. Closed cell foams do not absorb water. 4 and 3 layers of foam are superior to single layer foams (by 60%) as air is trapped between the layers that also increase "R" values. These tarps are double stitched at the hem with an extra edge flap of woven poly. This edge flap protects the internal foam from UV breakdown and external pollutants that also damage the foam and reduce the life of the blanket. The internal foam layers are cut to the edge of the finished blanket size to reduce heat loss at blanket edges. The foam inside will not shift as it is sewn and held by grommets to the outer cover. Translucent orange fabric allows light penetration.

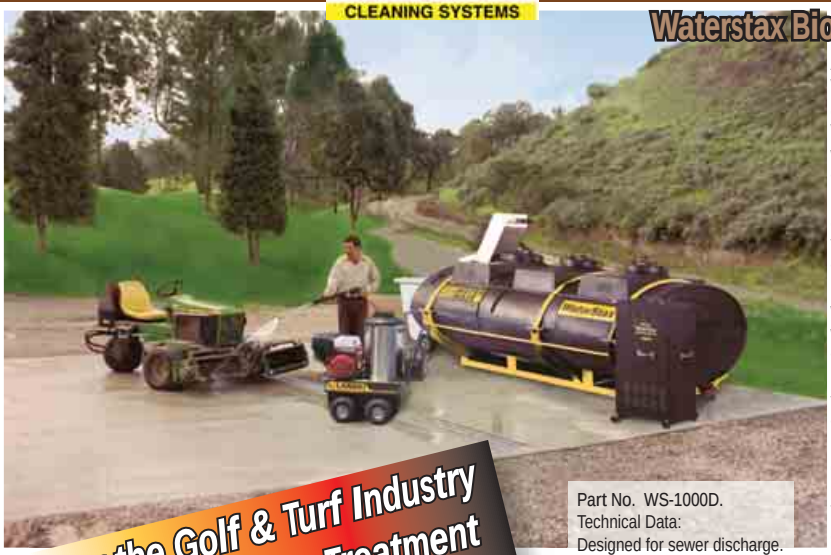
Waterstax Bioremediation Water Recyclinng System



For the Golf & Turf Industry — Wash Water Treatment & Recycling System

A new low cost and low maintenance method of treating wash water. WaterStax bioremediation technology removes oil, grease, hydrocarbons, and grass clippings from waste water.
WaterStax literally consumes the wastes — converting it into harmless water and carbon dioxide. The water is cleaned in several stages:
•SOLID SEPARATION:
Dirt, sand, and grass are removed from the wash water. The small amount of sludge is easily removed through a port at the bottom of each tank.
•BIO-TREATMENT:
BioStax 900, a proprietary liquid solution of microbes, breaks down the waste into harmless substances consisting mainly of carbon dioxide and water.
•POLISH:
Lastly, the water is polished with aeration and additional bioremediation in the third tank before discharge.
•FINAL POLISHING:
In the recycling system, the water is polished using ozone created from a corona discharge generator.

The WaterStax system is easy to operate and requires only a minimal amount of maintenance.

Part No. WS-1000D.
Technical Data:
Designed for sewer discharge.
Daily Capacity: 1000 GAS
Flow Capacity: 10 - 15 gpm
Electrical Data: 120V, 1 phase, 20 amp
Number of Tanks: 3
Tank Capacity: 1200 gallons

Bio-Puck HC & Coil Clean

Size Of Pit	How Many Pucks Needed Per Month	How Often To Apply
1 - 1000 gallons	1	1 each month
1000 - 2500 gallons	2	1 every 2 weeks
Over 2500 gallons	3	1 every 10 days

COIL CLEAN - Removes lime and scale build-up and restores heating coil efficiency.
Part No. 9-028008.

Landa's new Bio-Puck HC (hydrocarbon) is an easy and effective way to dramatically reduce oil and other hydrocarbons in a wash water collection pit or oil-water separator. Simply drop a puck into the oily water and the bacteria goes to work consuming the hydrocarbons and oily waste, thus reducing the disposal frequency and fees usually associated with oil-water separators and collection pits.
•Temperature: working range 5°C-45°C, optimum range 28°C.
•pH: working range 6.5 - 8.5; optimum range 7.0 - 7.5.
•Nutrients: Nitrogen 50-100 ppm
•Phosphorous: 50-100 ppm
•BioPuck HC is especially effective in degrading: Hydrocarbons, gasoline, diesel, jet fuel, motor oil, heating oil, lubricating oil, crude oil, paraffin, and others...
Part No. 9-0290011, The Bio-Puck HC comes in a 4-puck package with four containment nets and a BioNutrient additive.

NOZZLE FAN SELECTION

Select the nozzle degree, or spray angle, based on your application. Standard nozzle degrees — 0°, 15°, 25°, and 40°. Using the wrong nozzle can damage the surface you are cleaning.

0° — RED
Cutting nozzle. It delivers a concentrated stream that can gouge or cut. It can cut stubborn stains from concrete and other hard surfaces.

25° — GREEN
Flushing nozzle. The most commonly used nozzle for cleaning dirt from siding, sidewalks and metal furniture as well as for wet sweeping leaves.

15° — YELLOW
Chiseling nozzle. Working at a 45° angle, this nozzle works like a scrapper, stripping paint, grease and grime from hard surfaces.

40° — WHITE
Wash nozzle. Its wide spray allows you to wash and rinse a large area fast. It is usually safe with most surfaces, including aluminum siding, windows and vehicles.

Glass Bead Facts

Peening – Big Beads	Cleaning – Small Beads	Finishing – All Beads
•Remove larger, tougher soils •Fewer impacts per pound •Clean more slowly •Peen to more intensive levels •Can't reach small areas •Produce higher surface RMS or AA •Peen deeper zones in surface •Reclaim/separation easy, up to one or two mm **Produce brighter finish at same intensities as smaller beads; In practice, may consume slower than small beads, as less pressure required to accomplish work; As large as 4 mm diameters	•Remove smaller, lighter soils •More impacts per pound •Clean faster •Peen to less intense levels •Reach into keyways, fillets, and small areas •Produce lower surface RMS or AA •Peen outer zones on surface •Reclaim/separation easy, with care below 44 microns **Produce more matte finish at same intensities as large beads; In practice, may consume faster than large beads, as more pressure required to accomplish work; To 37 microns and finer diameter	•Peen to higher intensities at 90° nozzle angle •Consume greater at 90° nozzle angle •Consume greater at higher blast pressure •Consume greater as workpiece hardness increases •Consume greater as nozzle approaches workpiece •Clean less efficiently at 90° nozzle angle, due to narrowing of blast pattern area and "binding" by rebounding beads •Are inert, certain no free silica (not silicosis hazard like silica sand) and are easy and safely disposed of

**Note: Factors affecting final surface appearance, as well as consumption rate include shape of workpiece, composition of workpiece, hardness of workpiece, bead size, angle of nozzle, distance of nozzle from surface, air pressure, and type of delivery system (suction versus pressure blast).

CHAIN HOIST

STEEL FORMED CASE: Both gear and hand chain wheel sides are protected against external shock. DOUBLE COVER PROTECTION: Both hand chain wheel case and brake cover are designed to stop moisture and dirt from entering into their protective area. BRAKE MECHANISM: Whether the load is light or heavy, the brake mechanism will activate instantly when operation is stopped. DOUBLE RATCHET PAWLS: Two ratchet pawls are used for extra safety. Should one pawl fail, the other restrains the load. LOAD CHAIN GUIDE & STRIPPER: Assures proper fit of load chain to load sheave. Also protects against dirt and moisture from gathering in load sheave. POWDER METAL BUSHING: Increases mechanical efficiency and reduces the hand chain pull strength. SLACK END ANCHORAGE: When lowering heavy loads, it serves as a limit stopper to prevent any accidents caused by over lowering. LOAD CHAIN: Uses Grade 80 alloy load chain specially calibrated for hand chain block usage. All of the load chain meets or exceeds "ISO" and "DIN" standards. LOWER & UPPER HOOK: Both hooks are hot forged, heat treated and swivel. All hooks are standard equipped with safety latches to ensure proper hooking to the load or sling.

Performance Tool

OTC

MINUTEMAN PLUS BATTERY TESTER

Battery Testing - Tests all 12 volt automotive-type batteries with cold cranking amp ratings of 100-1500. This includes batteries found in motor vehicle, marine, agricultural, forestry and industrial applications. The tester operates from either 110 volts AC or its own internal, rechargeable 6 volt battery.

Starter Testing - The MinuteMan Plus display shows cranking volts and amps, and indicates either "Good Starter" or "Bad Starter". Excessive starter current draw revealed can indicate a possible defective starter. Excessive engine drag, due to tight or damaged bearings or piston drag, can also cause abnormally high starter draw.

Charging System Testing - Checks the charging system at high RPMs and at idle and stores the data. Results show regulator volts, peak amps and diode condition. MinuteMan Plus utilizes wave form analysis when testing alternator diodes, which provides more accuracy than the commonly used "ripple voltage" tests.

Battery Tachometer Capability - Unique, direct from battery technology gives you tachometer readings without having to make complicated connections to the ignition system. Provides battery sensing measurements to 4,000 RPM, with 1 RPM resolution

Part No. 3131AGM, MinuteMan Plus multi-application electrical system tester. Includes connector cables, internal rechargeable battery, battery charger and instructions, roll-around cart with two additional shelves.

AIR/HYDRAULIC PUMP

With shop air as the energy source, these pumps have the power and oil capacity to drive even the large 55 ton rams. They are ideal all-around power sources for dozens of body, frame, and alignment applications. They can be used with a variety of rams, presses, and hydraulic pullers operating at up to 10,000 psi. An internal relief valve protects the hydraulic components regardless of hydraulic pressure. In addition, a two stage release mechanism gives fast or metered ram return while reducing hydraulic shock. Requires 9 cfm @ 100 psi air pressure at the pump. Equipped with a 15 ft. remote control cord. 3/8" NPTF oil port. 98 cu. in. usable oil capacity in plastic reservoir.
Part No. 4020.

SINGLE STAGE HAND OPERATED PUMP

Ideal for operating single acting rams. Use to power gear and bearing pullers, shop forcing presses, and in other hydraulic applications. A single piston, single stage type, this pump develops pressures up to 10,000 psi. Operates horizontally or vertically with the pump head in the "down" position. Finger-tip control valve provides instant release or pumping action. Features built-in overload valve. 1/2" piston diameter; 13/16" piston stroke. 3/8" NPTF oil port.

STRUTTAMER™ ELITE FOR STRUT SPRINGS

this is simply the most effective compressor for handling virtually any straight, conical, or offset spring. With its adjustable arms and four point locking jaws, the StrutTamer Elite securely holds the spring in place. To keep the strut assembly straight during compression, we've developed a centre screw that floats from side-to-side. This way the strut and spring remain aligned - no matter what condition the spring is in. The StrutTamer Elite also features a 3 bar handle crank design that compresses the spring faster and easier. Can easily be mounted to the wall without the need for adapters, or you can choose the optional stand. The StrutTamer Elite stand features steel frame construction with two wheels that allow you to easily tilt the stand back and move the entire unit to the work area. To keep it firmly in place during compression, the wheels lift off the floor, and four no-slip rubber pads keep the stand firmly in place during operation. The stand is narrower for easier mobility between vehicles in the shop. Strut Spring Coverage: 2½" to 10" spring diameters; 2½" to 24" vertical stroke range.

Portable heaters provide clean, efficient heat for all types of garage, warehouse and outdoor applications where a permanent heat source is unavailable or has been temporarily interrupted.

HOW DOES KEROSENE FORCED-AIR HEAT WORK?

Kerosene heaters are used in outdoor applications (brick and block laying, building construction) to keep workers comfortable and to prevent newly-applied concrete from freezing. Since their fuel source is self-contained, they're truly portable—wheels and handles are included. Kerosene heaters aren't affected by fluctuations in temperature. They provide instant, safe, portable heating at temperatures as low as minus 20º F. The fuel system. An air pump forces compressed air through a hose and a burner nozzle, creating a vacuum and causing fuel to rise from the tank. The air and fuel mix to create a fine mist that's sprayed into the combustion chamber. The ignition/control system. The ignitor mechanism provides a spark that ignites the air-fuel mist inside the combustion chamber. The safety control system automatically shuts down the unit in the event of loss of flame or lack of fuel. The air system. An electric motor turns a fan that pushes air into and around the combustion chamber,heating it and propelling it out the barrel and into the surrounding environment.

HOW DOES PROPANE FORCED-AIR HEAT WORK?

Propane forced-air units are clean-burning and odor-free, ideal for indoor projects such as drywalling, painting, finish work, flooring, concrete curing, cabinetry, and many other do-it-yourself projects. They can either be easily refilled or conveniently connected to a central fuel source. The fuel system. The hose and regulator assembly attaches to the propane (LPG) supply and provides fuel to the heater at the proper pressure. The ignition/control system. The ignitor mechanism provides a spark that ignites the air-fuel mist inside the combustion chamber. The safety control system automatically shuts down the unit in the event of loss of flame or lack of fuel. The air system. An electric motor turns a fan that pushes air into and around the combustion chamber, heating it and propelling it out the barrel and into the surrounding environment.

HOW DOES PROPANE INFRARED HEAT WORK?

Reddy Heater infrared units "warm like the sun," heating people and objects before heating the air. They're also wind-resistant, making them an ideal source of heat for drafty and open areas where the heat can't be contained. The hose and regulator assembly attaches to the propane (LPG) supply and provides fuel to the heater at the proper pressure. Every ReddyHeater infrared unit features an automatic control valve shuts down the unit in the event of loss of flame or lack of fuel.

E.C. MITCHELL CO., INC.

Abrasive Cords & Tapes

Mitchell's flexible cords and tapes deburr, grind and polish hard to reach areas which are inaccessible to most standard tools. Ideal for narrow slots, grooves, small holes, and curved surfaces, the round cords and flat tapes can be used on metal, plastic, and wood. Impregnated with aluminum oxide for ultrafine polishing, Mitchell's abrasive cords are available in 0.030" to 0.093" diameters and the tapes come in 1/16" to 1/4" widths. Both are supplied on handy adhesive tape like spools in generous 50 foot lengths. •Cords Remove Carbon from Pistons - Baked on carbon is no match for these abrasive cords. Mitchell's abrasive cords come in the precise diameters required to reach deep into piston ring seats. •Cords Clean Blocked Fuel Lines - Extremely flexible, these small diameter cords fit into places where rigid tools cannot. •Better for Grooves than Sandpaper - Abrasive cords and tapes eliminate the bother of trying to fold and fit sandpaper into deep grooves. They are ideal for finishing new wood spindles or stripping old furniture. •Cords and Tapes Clean Rusted Threads - These cords and tapes are tough enough to deburr and remove rust, paint, and sludge from pipe threads and other contoured surfaces. •Remove Solder from Printed Circuit Boards - Ideal for preparing a surface for soldering or removing solder flash, small diameter cords and tapes can easily reach through holes and around components or leads. •Ultrafine Cords even Thread a Needle - There is no better way to reach into holes. For maintenance applications, Mitchell's ultrafine abrasive cords clean tubing or nozzle blockages caused by soot, rust, or corrosion.

FLEX-HONE® CYLINDER BORE FINISH TOOLS

With minimal stock removal and without damaging or changing the micro substructure of the metal, the Flex-Hone tool plateaus the surface, removes cut, torn and folded metal creating a cross-hatched finish that retains a film of oil, reducing friction, ring wear, and the factors that lead to scuffing. In hydraulics and two-stroke engines there is the double benefit of radiusing the ports and finishing the cylinder walls in a single operation. Note: Flex-Hone grits cannot be compared to stone type grits.

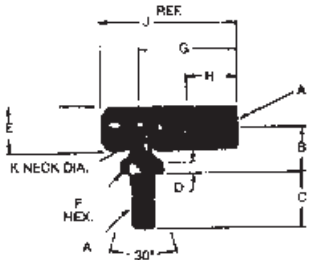
Spring Loaded Type A



Type A Ball Joints are a spring loaded S.A.E. design used widely for throttle control and other applications where zero end-play is required and tension due to spring compression is not objectionable. Fully conform with S.A.E., GMC and other published standards including the additional advantages of case hardened seats and ball studs for extra wear resistance, plus plating for maximum corrosion resistance. Materials of Construction — Made of C12L14 carbon steel. Seat members are made of C1008 steel. Both ball stud and seat members are Carbonitride case hardened to a depth of .005 to .008. Assemblies are plated and clear dichromate treated for extra corrosion resistance.

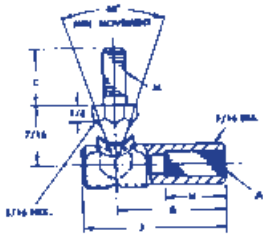
Disconnecting Type P



Type P Ball Joints are a low cost disconnect design for throttle and governor controls where minimum weight is required. Length adjustments are simplified because of the disconnect feature. All sizes have a ball stud ball diameter of .252" and a ball stud neck diameter of .140". The hardened spring steel retaining clip accepts ball stud member at 19 pounds maximum push-in load and permits removal of ball stud with 14 pounds minimum pull-out load.

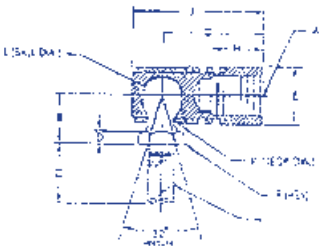
Quick Disconnect Type SS



Type SS Ball Joints are high strength, quick disconnect assemblies with good wear characteristics. Patented design features "key hole" retaining sleeve which insures that the assembly can only be put together with the sleeve positively aligned with the ball cavity. When the spring is released, alignment is automatic, thereby eliminating any possibility of partial closure. Body and ball are of low carbon steel. Ball studs are surface hardened for wear resistance. All components except the stainless steel spring are plated yellow dichromate treated for corrosion resistance

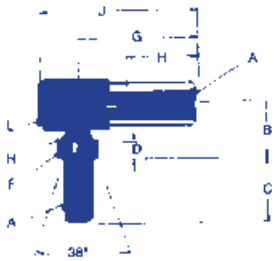
Flat Top SPG Type



Type SPG Ball Joints are designed for heavy duty service. This is a high strength design with good wear resistance. An oil and ozone resistant Buna-N rubber dirt shield provides protection against abrasive dirt. "Flat Top" alignment guide shown in drawings above is designed for standard wrench sizes. Provides a mechanical and visual aid which makes it easy to align the ball stud in its vertical position for maximum movement in all directions. Pull out and tensile strength — A new method of assembly swages more than twice the amount of metal to retain the ball in the cavity. This results in tremendously increased pull out and wear resistance.

PERMA-THREAD

Helically Coiled Inserts

PERMA-THREAD •THREAD REPAIR KITS •INSERT PACKS

Perma-Thread helically coiled inserts are made of stainless steel wire that has been rolled to a carefully controlled thread form. When installed, Perma-Thread inserts adjust to a tapped hole, becoming a functional thread with a strength exceeding the original.
Perma-Thread inserts and repair kits are designed to repair stripped threads in a variety of metals. Aluminum, aluminum alloys, steel, and cast iron. If the original threads can be stripped, Perma-Thread inserts can repair them. By following the detailed instructions enclosed in every Perma-Thread Kit, even an inexperienced do-it-yourselfer can repair stripped threads, permanently.

VELCRO®
Hook & Loop Component Fasteners

Velcro® brand nylon fasteners consist of two mating components: hook and loop. The woven hook tape consists of minute, flexible "hooks" which engage with a mating loop tape comprised of small, soft "loops". When pressed together, the resulting closure is adjustable, highly secure and jam proof. To reopen (cycle), the closure is simply peeled apart. Velcro® brand woven hook and loop tapes are manufactured by a precise and refined weaving process which ensures uniformity of dimensions and construction.

Because you need a "hook" and a "loop" as described above for a complete fastening system, we offer both Velcro® components in 5 ft. sections or 25 yard rolls (except where otherwise noted). Depending upon the strength requirements for your application, "hook" components are available in three strengths. Each hook style will work with the Loop 1000 offered below. About the adhesive: the self adhesive components available below feature Spectrum™ (0172) which is an acrylic pressure sensitive adhesive for superior bond strength and which has a temperature operating range from 0°F to 225°F. Full bond strength in 24 hours.
